

# Mathematical Autobiography

Fan Zhuo

09/06/2007

## 1 Background

I was born in China. I did my studies in two cities in China. They are Chengdu and Beijing. In 2004, I got my BS in applied mathematics from Beijing Institute of Technology. I continued my math study in Sichuan University and got my MS in computational mathematics in June, 2007.

## 2 Interests and Goals

My current interests are in computational mathematics and computer science. I want to have a better understanding of computational mathematics and its application. I hope to apply the knowledge of computational mathematics, especially by the help of computer, to solve some problems both in math and in real life.

## 3 Participation in this Project

I hope to join this project, because in my opinion most of the math researches are conducted by individuals instead of a group of people. I want to have an idea of how group research works and what are the benefits of a group research.

## 4 Preferred Learning Styles

I have a Multimodal Learning Style according to the online test. My scores are the following: Visual: 4, Aural: 8, Read/write: 4, Kinesthetic: 7.
